A. Background

Indonesia is working to achieve zero new HIV paediatric infection towards ending AIDS and elimination syphilis congenital by endorsed policy for Triple Elimination in 2017. One of the key policy needed to achieve the elimination is to update the services standard, including diagnosis and treatment for the three diseases, and good quality program data. Currently there were about 2,000 STI services report to the MOH NAP/STI programme, only 300 PHC of those noted reporting syphilis screening among pregnant women, out of 9,700 healthcare services.

National HIV AIDS and STIs is going to update STIs case management guideline for healthcare services and expand the intervention for preventing STI among adolescents. There is a trend of increased number of STIs cases in several hospitals and private clinics in several cities from data collected by the member of Indonesian Society of Dermatology and Venereology (ISDV) STIs Study Group. This is in line with the STIs cases reported from some provinces.

Currently, there is several services SOPs intervention for syphilis screening used in clinics, hospital, and programs. Treatment for syphilis is only can be done by a specialist, and the availability for Benzathine Penicillin and the other STI drugs limited in several puskesmas and health services. With the new guideline, all healthcare services can use the same standard and have access for Benzathine Penicillin and the other STI drugs.

B. Objective

To update of National STI case management guideline

C. Expected Output

An updated National STIs case management guideline drafted for clinical services standard

D. Methods

The process will be conducted through series of meeting initiated by contractor and MOH team, to review, discuss and write the updated guideline. A guideline dissemination workshop to provinces will be further conducted (2nd batch).

1. Preparation for the whole process: meeting Consultant, WHO and MOH team; 1 day meeting in office, 12 participants, including 3 local resource persons.
2. Preparation meeting (brainstorming for contents): to review the guideline, discuss the proposed update and agree, with direction from MOH; 2 days meeting in hotel, 36 participants, including travel participants to/from out of Jakarta.
3. Workshop preparation meeting: 1 day in office, 12 participants.
4. Guideline development: to present the first draft, discuss and get inputs from MOH and stakeholders; 2 days workshop in hotel, 40 participants, including 4 resources person per day) and travel participants to/from out of Jakarta.
5. Finalize the draft and Consultant technical report: 2 times, 1 day meeting in office, 12 participants.
A national consultant is responsible for writing process, based on these criteria:

- Essential: Medical degree, preferred has post-graduate or trained in STIs control or venearology or advance training in STI diagnosis and treatment, and updated with STI/HIV control program and MOH latest policy.
- Have recent update with WHO recommendations for STI screening, diagnosis and treatment.
- Be able to work closely with MOH and meet deadline agreed with MOH.
- Familiar with the MOH guideline outline.
- Able to write summary of guideline and technical report in English.
- Able to present the work to WHO Indonesia Country Office team upon completion.

Scope of Work

The Consultant (and team) will facilitate meetings, review the current guidelines and WHO latest recommendations on STIs, and develop the updated STI guidelines.
